Financial Management from an Emerging Market Perspective Soner Gokten 2018-01-17 One of the main reasons to name this book as Financial Management from an Emerging Market Perspective is to show the main differences of financial theory and practice in emerging markets other than the developed ones. Our many years of learning, teaching, and consulting experience have taught us that the theory of finance differs in developed and emerging markets. It is a well-known fact that emerging markets do not always share the same financial management problems with the developed ones. This book intends to show these differences, which could be traced to several characteristics unique to emerging markets, and these unique characteristics could generate a different view of finance theory in a different manner. As a consequence, different financial decisions, arrangements, institutions, and practices may evolve in emerging markets over time. The purpose of this book is to provide practitioners and academicians with a working knowledge of the different financial management applications and their use in an emerging market setting. Six main topics regarding the financial management applications in emerging markets are covered, and the context of these topics are "Capital Structure," "Market Efficiency and Market Models," "Merger and Acquisitions and Corporate Governance," "Working Capital Management," "Financial Economics and Digital Currency," and "Real Estate and Health Finance."

Macroeconomic Stabilization in the Digital Age John Beirne 2020-12-29 Macroeconomic Stabilization in the Digital Age provides insights into factors affecting the macroeconomic management of the economy in the digital age. Policy makers need to be aware of the increasing prominence of the digital economy and digital finance and seek to better understand how continued digitalization will affect policies aimed at managing the economy. For emerging market economies (EMEs), macroeconomic policy challenges have been exacerbated by the digital finance revolution in the aftermath of the global financial crisis and the coronavirus disease (COVID-19) pandemic, when many EMEs experienced large and volatile capital flows. Policy makers must also navigate through fluctuating trends in productivity and difficulties in estimating potential output in the era of digitalization. The book is organized into three main parts: (1) digital finance and the macroeconomy, (2) capital flows and systemic risk in the digital age, and (3) macroeconomic uncertainty and new challenges for central banks. Part I is set against the context of the shift in financial intermediation away from traditional banks as large technology firms have increasingly provided financial services over the past decade. This part of the book focuses on the macroeconomic effects of digital finance and financial technology. Part II examines capital flow-related developments in the digital age, where the expansion in cross-border capital flow channels can create additional hurdles for EME authorities in managing capital flows. Finally, Part III relates the digital age to challenges faced by central banks and the implications of digitalization for the monetary policy transmission mechanism.

Managing Capital Flows Masahiro Kawai 2010-01-01 Managing Capital Flows provides analyses that can help policymakers develop a framework for managing capital flows that is consistent with prudent macroeconomic and financial sector stability. While capital inflows can provide emerging market economies with invaluable benefits in pursuing economic development and growth, they can also pose serious policy challenges for macroeconomic management and financial sector supervision. The expert contributors cover a wide range of issues related to managing capital flows and analyze the experience of emerging Asian economies in dealing with surges in capital inflows. They also discuss possible policy measures to manage capital flows while remaining consistent with the goals of macroeconomic and financial sector stability. Building on this analysis, the book presents options for workable national policies and regional policy cooperation, particularly in exchange rate management. Containing chapters that bring in international experiences relevant to Asia and other emerging market economies, this insightful book will appeal to policymakers in governments and financial institutions, as well as public and private finance experts. It will also be of great interest to advanced students and academic researchers in finance.

The chapter develops financial conditions indices that make it possible to compare a large set of advanced and emerging market economies.

World Economic Outlook, October 2019 International Monetary Fund. Research Dept. 2019-10-15 World Economic Outlook, October 2019 **Behavioral Finance: The Second Generation** Meir Statman 2019-12-02 Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.

Equity Valuation: Science, Art, or Craft? Frank J. Fabozzi 2017-12-27 The price at which a stock is traded in the market reflects the ability of the firm to generate cash flow and the risks associated with generating the expected future cash flows. The authors point to the limits of widely used valuation techniques. The most important of these limits is the inability to forecast cash flows and to determine the appropriate discount rate. Another important limit is the inability to determine absolute value. Widely used valuation techniques such as market multiples - the price-to-earnings ratio, firm value multiples or a use of multiple ratios, for example - capture only relative value, that is, the value of a firm's stocks related to the value of comparable firms (assuming that comparable firms can be identified). The study underlines additional problems when it comes to valuing IPOs and private equity: Both are sensitive to the timing of the offer, suffer from information asymmetry, and are more subject to behavioral elements than is the case for shares of listed firms. In the case of IPOs in particular, the authors discuss how communication strategies and media hype play an important role in the IPO valuation/pricing process.

Firm Innovation in Emerging Markets Meghana Ayagari 2007 The authors investigate the determinants of firm innovation in over 19,000 firms across 47 developing economies. They define the innovation process broadly, to include not only core innovation such as the introduction of new products and new technologies, but also other types of activities that promote knowledge transfers and adapt production processes. The authors find that more innovative firms are large exporting firms characterized by private ownership, highly educated managers with mid-level managerial experience, and access to external finance. In contrast, firms that do not innovate much are typically state-owned firms without foreign competitors. The identity of the controlling shareholder seems to be particularly important for core innovation, with those private firms whose controlling shareholder is a financial institution being the least innovative. While the use of external finance is associated with greater innovation by all private firms, it does not make state-owned firms more innovative. Financing from foreign banks is associated with higher levels of innovation compared with financing from domestic banks.
