*The Modern Data Warehouse in Azure* Matt How 2020-06-15 Build a modern data warehouse on Microsoft's Azure Platform that is flexible, adaptable, and fast—fast to snap together, reconfigure, and fast at delivering results to drive good decision making in your business. Gone are the days when data warehousing projects were lumbering dinosaur-style projects that took forever, drained budgets, and produced business intelligence (BI) just in time to tell you what to do 10 years ago. This book will show you how to assemble a data warehouse solution like a jigsaw puzzle by connecting specific Azure technologies that address your own needs and bring value to your business. You will see how to implement a range of architectural patterns using batches, events, and streams for both data lake technology and SQL databases. You will discover how to manage metadata and automation to accelerate the development of your warehouse while establishing resilience at every level. And you will know how to feed downstream analytic solutions such as Power BI and Azure Analysis Services to empower data-driven decision making that drives your business forward toward a pattern of success. This book teaches you how to employ the Azure platform in a strategy to dramatically improve implementation speed and flexibility of data warehousing systems. You will know how to make correct decisions in design, architecture, and infrastructure such as choosing which type of SQL engine (from at least three options) best meets the needs of your organization. You also will learn about ETL/ELT structure and the vast number of accelerators and patterns that can be used to aid implementation and ensure resilience. Data warehouse developers and architects will find this book a tremendous resource for moving their skills into the future through cloud-based implementations. What You Will Learn Choose the appropriate Azure SQL engine for implementing a given data warehouse Develop smart, reusable ETL/ELT processes that are resilient and easily maintained Automate mundane development tasks through tools such as PowerShell Ensure consistency of data by creating and enforcing data contracts Explore streaming and event-driven architectures for data ingestion Create advanced staging layers using Azure Data Lake Gen 2 to feed your data warehouse Who This Book Is For Data warehouse or ETL/ELT developers who wish to implement a data warehouse project in the Azure cloud, and developers currently working in on-premise environments who want to move to the cloud, and for developers with Azure experience looking to tighten up their implementation and consolidate their knowledge

*Hit the Headlines* Colin MacFarlane 2012 Hit the Headlines charts out a series of fun and inspiring, cross-curricular journalism workshops that enhance key skills and confidence in areas such as: Writing and editing. Critical assessment. Interviewing and observation. Mental flexibility and resourcefulness. Role-playing and teamwork. This book will enable teachers of 9 – 15 year-olds to involve their students in a number of effective and well-tested exercises, games and scenarios, which will encourage them into enthusiastically seeking out and gaining further knowledge in areas such as news, journalism, social issues, IT, data assessment, 'intelligent observation', and enhanced questioning and listening. This is 'organic learning' at its best! An introduction to the theory behind the book summarises short and long term learning outcomes

which your students can achieve through these methods, explaining why scenarios which feel 'real' can immerse students and inspire them to achieve greater proficiency. The author also flags up particular aspects of the book which encourage readers to read and use it systematically, as well as to take on specific challenges themselves in order to better assist their students in the writing and editing challenges it contains. Practical photocopiable templates for many chapters are provided, which can be used as classroom (and out-of-classroom) exercises, examples and solutions to exercises. Through these engrossing journalistic scenarios, students will learn how to critically assess levels of 'interest and importance' of diverse facts, and so begin to understand that report or presentation writing of any sort involves sequencing a critical balance between these two factors. Readers and users of this book can go on to customise their own scenarios, drawing on the stimulating techniques outlined to improve their students' factual writing and related thinking skills. In particular, classroom teachers in primary, middle and secondary schools and all literacy co-ordinators will find this book extremely useful, as well as students studying for PGCEs and NQTs.
